

Dr. Paula — A Love Beyond Space

In the aftermath of a cataclysmic meteor storm that renders Earth nearly uninhabitable, humanity clings to survival on a lunar base. Amidst the cold sterility of space, one woman dares to bridge the impossible. **Dr. Paula**, a brilliant physicist with a troubled past, is driven by more than scientific curiosity — she seeks to restore lost connections through the power of **quantum entanglement**. Haunted by memories of a world gone silent and a love suspended across the stars, she works tirelessly on an experimental communication system that could rewrite the future.

But time is running out. Her partner, **Captain Rafael Navarro**, is drifting ever deeper into uncharted space, far beyond the reach of traditional technology. As Paula faces opposition from skeptical colleagues and battles the ghosts of her own decisions, her experiment becomes a race against both physics and fate.

Dr. Paula is a richly layered **science fiction romance** about **love, memory, and survival**. Blending speculative science with emotion and philosophical depth, it asks timeless questions about what it means to be human — even when the world as we know it has ended.
